The input-output structure of the Canadian economy

1979-81

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Input-Output Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8908) or to the Statistics Canada reference centre in:

| | | | |
|------------|------------|----------------|------------|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (949-4020) |
| Montréal | (283-5725) | Regina | (359-5405) |
| Ottawa | (990-8116) | Edmonton | (420-3027) |
| Toronto | (966-6586) | Vancouver | (666-3691) |

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

THE SYSTEM OF NATIONAL ACCOUNTS

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System will now carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67) in their more summary form, are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services in current and constant prices is portrayed in the Input-Output tables of the System (Catalogue with prefix 15). The Catalogue Nos. carrying the prefix 61 provide constant dollar measures of the contribution of each industry to total Gross Domestic Product at factor cost. Inputs and

outputs are related in Productivity Studies (Catalogue with prefix 14).

Both the Input-Output Tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics, and the legal entity is the main unit of classification of transactors. Levels of outstanding financial assets and liabilities are published annually as a major contribution towards a complete national balance sheet.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise-company-establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in the United Nations publication, *A System of National Accounts* (Studies in Methods, Series F, No. 2, Rev. 3, Statistical Office, Department of Economic and Social Affairs, United Nations, New York, 1968).

- **Larry Bolduc**, Chief, Goods Producing Industries
- **Steve O'Brien**, Chief, Construction, Services and Trade
- **Krishna Murty**, Chief, Government Sector

Introduction

This report presents annual Input-Output Tables for Canada for the years 1979-81. Work is under way on the historical revision of the Input-Output tables covering the period 1961-81 as well as the preparation of the 1981 Input-Output Tables on 1980 SIC (Standard Industrial Classification).

Because of work load of historical revision as well as rebasing 1981 tables, the Input-Output tables for 1982 will not be prepared this year. However, the Input-Output tables for 1982 and 1983 will be published in spring 1987, resuming the annual production cycle.

This report does not contain the textual material ordinarily included in the annual publication. For the Input-Output tables of 1971-78 and the textual material, readers are referred to "*The Input-Output Structure of the Canadian Economy 1971-80*" (catalogue 15-201).

The framework of the Canadian tables bears a close relationship to the one described in the United Nations report "*A System of National Accounts*."¹ The inputs and outputs of industries are presented in separate tables; both inputs and outputs are classified by commodity. Commodities are clearly distinguished from industries, the number of commodities exceeding the number of industries. The Canadian Input-Output Tables are rectangular rather than square. The rectangular format has two very important advantages over the traditional square format: (1) it admits as much detail as is available in the basic census sources; and (2) the meaning of each entry is straightforward because observed transactions are not combined with fictitious transfers. Canada had a pioneering role in both the theoretical and empirical development of rectangular Input-Output Tables, a development pursued by practitioners in Statistics Canada and in other institutes. Preliminary Input-Output Tables for the year 1961 were published by Statistics Canada in 1969 in two volumes: *Input-Output Structure of the Canadian Economy, 1961*; Vol. I (Catalogue 15-501), Vol. II (Catalogue 15-502). In these volumes a comprehensive description of the detailed accounting framework, analytic uses, the published tables, classification systems and selected definitions and an extensive section on the mathematical treatment of analytic uses were given. This document gives the most complete description of the development of the accounting framework and the classification systems that underlie the current Canadian tables, although subsequent work has led to refinements in the classification systems, particularly in the articulation of the categories of final demand, in comparison to the preliminary 1961 table. Further evidence of the contemporary Canadian work on the development of rectangular Input-Output Tables, applied in a provincial context, can be found in *Rapport intérimaire sur le système de comptabilité économique du Québec, le système et son fonctionnement*, Bureau de la statistique du Québec et Laboratoire d'économétrie, Université Laval; juillet 1967. Another illustration of the application of the Canadian Input-Output accounting framework in a provincial context can be found in *Input-Output Study of the Atlantic Provinces, 1965*, by

Kari Levitt; Vol. I, *Social Accounting Matrix and Models* (Catalogue 15-503E), Vol. II, *Structural Analysis and Data Sources* (Catalogue 15-504E), published by Statistics Canada.

Three tables have been prepared and presented for each year: (1) Make Matrix, (2) Use Matrix, and (3) Final Demand Matrix. At the most detailed level, the system has been balanced with 191 industries, 595 commodities and 136 categories of final demand. In addition there are seven primary inputs: wages and salaries, supplementary labour income, net income of unincorporated business, other operating surplus, commodity indirect taxes, other indirect taxes and subsidies. Though all the tables are prepared at the L level of aggregation, it is only at aggregation level S and M that we publish these tables here. The dimensions of these aggregations are given below:

| Designation of aggregation | Number of industries | Number of final demand categories | Number of commodities and primary inputs |
|----------------------------|----------------------|-----------------------------------|--|
| S | 16 | 14 | 49 |
| M | 43 | 29 | 100 |
| L | 191 | 136 | 602 |

Tables at aggregations S and M are presented in this volume. Some cells of the Make Matrix at aggregation M are confidential. These cells have been suppressed though industry totals and commodity totals have been preserved. However, the complete Make Matrix (including confidential cells) has been used for the calculation of impact tables presented in this volume.

At the L level of detail, many of the entries in the various matrices are confidential under the provisions of the Statistics Act. However, there is now a public data base available at Aggregation L which displays 191 industries, 602 commodities and primary inputs and 136 categories of final demand, for all years from 1971. In this public data base confidential entries have been suppressed and the values rounded from thousands of dollars to millions of dollars. At the Canada total level, only two industries and about 60 commodities are suppressed.

Another data base is available at the CANSIM which gives industry totals and commodity totals at the L level of aggregation, all in both current and constant prices, as well as estimates of employment by industry at the L level, for all years from 1961. Again confidential data are excluded. The following list summarizes the available data, with values presented in both current and constant prices:

- Gross output by industry. This does not include commodity detail by industry.
- Gross intermediate inputs by industry. This does not include commodity input detail by industry.
- Gross Domestic Product at factor cost by industry.
- Indirect taxes and subsidies by industry.

¹"A System of National Accounts, Studies in Methods, Series F, No. 2, Rev. 3," United Nations, New York, 1968.

- (e) Employment by industry (experimental data base).
- (f) Gross output by commodity.
- (g) Gross intermediate commodity use.
- (h) Exports by commodity.
- (i) Imports by commodity.
- (j) Other final demand use by commodity.
- (k) Gross inputs by category of final demand.

domestic availability by commodity at the 595 commodity detail level.

Data for items (a), (b), (c) and (d) at current prices are contained in Cross-classified CANSIM Table 00120112; data for items (a) to (d) at constant (1961) prices for the years 1961-71 as well as for item (e) are in CANSIM Table 00120113; the same data base at constant (1971) prices for the years 1971 and onwards are in CANSIM Table 00120114. Data for items (f) to (k) at current prices are in CANSIM Table 00120109; the same data at constant (1961) prices for the years 1961-71 are in CANSIM Table 00120110 and at constant (1971) prices for the years 1971 and onwards are in CANSIM Table 00120111.

Items (f), (h) and (i) provide all the detail necessary to obtain

Appendix A

Aggregation Parameters for the Input-Output Tables

This Appendix includes the following:

- (1) Input-Output industry title set at the L aggregation (the most detailed) level with five-digit number and sequential number corresponding to each Input-Output industry.
- (2) Definition of Input-Output industry in terms of the 1960 and 1970 Standard Industrial Classification codes.
- (3) Two levels of aggregation — S and M — defined in terms of the L aggregation sequential numbers and the title sets for each level of aggregation of industries.

The levels of aggregation are hierarchical. The level “S” can be derived from the level “M” and the level “M” can be

derived from the level “L”. The hierarchical basis of aggregation is also true for commodities and categories of final demand.

- (4) Input-Output commodity title set at the L aggregation level with five-digit number and sequential number corresponding to each Input-Output commodity.
- (5) Two levels of aggregation — S and M — defined in terms of the L aggregation sequential numbers and the title set for each level of aggregation of commodities.
- (6) Input-Output category of final demand title set with five-digit number and L aggregation sequential number corresponding to each Input-Output category of final demand.
- (7) Two levels of aggregation — S and M — defined in terms of the L aggregation sequential numbers and the title set for each level of aggregation of categories of final demand. The S and M levels of aggregation bear close relationship with the information published in the National Income and Expenditure Accounts.

AGGREGATION PARAMETERS (INDUSTRIES)
